

Valset havre

Enkeltfoder

Fodermateriale

Den indeholdte stivelse fordøjes vældig godt i hestens tyndtarme. Havre har et højt indhold af fordøjelsesfremmende slim, store mængder af umættede fedtsyrer samt de essentielle aminosyrer lysin og methionin. En anden fordel er den høje procentdel af skaller. På grund af dens struktur tygger hestene godt, og der sker en god salivation. Dette har igen en positiv effekt på fordøjelsen. Havre har imidlertid et meget ubalanceret forhold mellem calcium og fosfor. Det indeholder kun lidt calcium, men meget fosfor, hvilket kræver justering med et afbalanceret mineralfoder. Varmebehandlingen under valseprocessen inaktiverer fedtspaltende enzymer i havrekornet, og kornene bliver stabile. Ulempene, såsom svampevækst og fedtfordærvning, som opstår under den normale knusningsproces med en havreknuser, udelukkes med den hydrotermisk behandlede valsede havre. På grund af den forbedrede holdbarhed er vores valsede havre kun let melasseret.

Fodringsanbefaling:

Feeding recommendation:

for horses:

- Due to easily available energy in connection with a high content of lysine and valuable fatty acids, oats are often fed to sport and breeding horses.
- It contains little calcium but a lot of phosphorus, so in the case of traditional hay plus oat diets, the supplementation with a balanced mineral feed is necessary.

for chicken and other poultry species:

- As a certain amount of crude fiber in the diet has a positive effect on the bacterial flora in the poultry's intestinal tract, oats, with their high proportion of husks, offer a useful supplement in case of dysbalances in the gut flora.
- That can manifest themselves, for example, in feather pecking.
- In order to avoid negative effects on protein utilization in the body if the feed contains too much crude fiber, oat feeding should be limited.
- For pullets and chicks we recommend a mixing rate of approx. 10% in the complete feed, for laying hens and breeders up to 20% can be mixed in.

for small animals:

- As with all types of grain, caution is also required with oats in order to feed rabbits and rodents appropriately.
- But in special situations, it can make sense to energetically upgrade the feeding.
- Our rolled oats can, for example, be offered over the winter months, in the event of emaciation, e.g. after an illness, or also for pregnant animals as an

energy-rich feed supplement. Excessive loss of weight should always be clarified by the treating vet.

- In order to encourage the animals to keep themselves busy, we recommend distributing 0.5-1 teaspoon under the fresh bedding or in the hay.

Sammensætning: 97,0 % Havre (flager), 3,0 % Sukkerroemelasse

ford. Råprotein (vRp): 84,8 g/kg
prececal digestible protein (pcvRp): 69,4 g/kg
fordøjelig. energi (MJ DE): 12,0 MJ DE/kg
Metabolizable energy (MJ ME): 11,0 MJ ME/kg

Analytiske komponenter og indholdsniveauer: 10,80 % Råprotein, 4,50 % Råfedt, 10,00 % Råfiber, 2,90 % Råaske, 0,10 % Calcium, 0,30 % Fosfor, 38,0 % Styrke

Tilsætningsstoffer pr. kg: 335,00 mg Propionic acid (1k280), 324,00 mg Propionsäure aus Natriumpropionat (1k281) ^{TA}

NA = Næringsstoffer
ZA = Zootekniske tilsætningsstoffer
TA = Teknologiske tilsætningsstoffer
